

GLOVE SIZING GUIDE

Did you know that in your fingertips there are 17,000 touch-sensitive receptors? That's the reason why people sometimes say that they can't work with gloves however if you have the right fitting gloves that are close at the fingertips then the glove and hand can work together in a comfortable, productive and safe manner. With this in mind we have developed a sizing guide for our range to ensure that you get the best fitting glove.

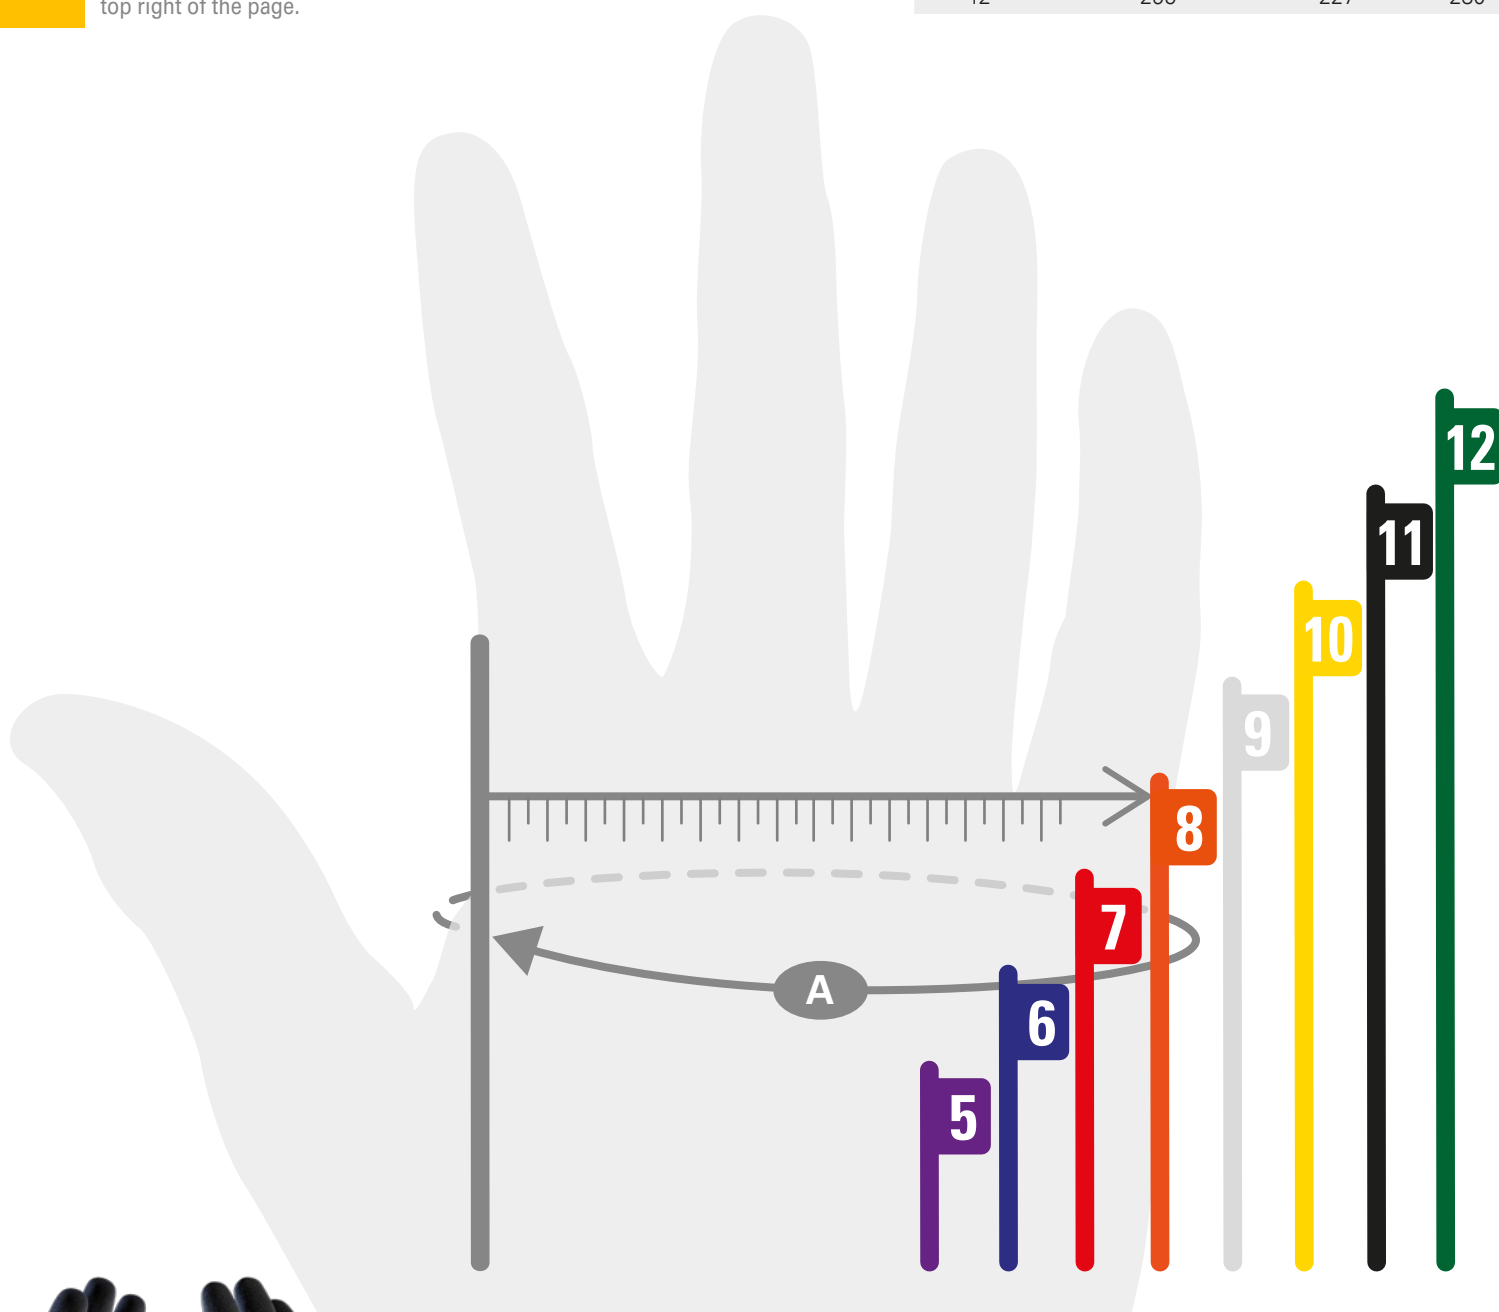

How to use

Place your hand on the image below. With your index finger aligned with the vertical grey line place your thumb crotch on the silhouette. Please ensure the grey line remains visible and look at the right hand side of your hand to which coloured line is closest to your hand.

Please note when printing this document it has to be printed in an A4 format.

Alternatively you can find your glove size by measuring the circumference of your hand according to the arrow in the graphic (A) and matching this to the table on the top right of the page.

Glove Size	Hand (mm)		Glove
	Palm Circumference	Length	Minimum Length
5	137	148	210
6	152	160	220
7	178	170	230
8	203	182	240
9	229	192	250
10	254	204	260
11	279	215	270
12	295	227	280

MaxiFlex®

combines durability, cleanliness and comfort. These gloves are available in 8 sizes for the best user experience. **Try them on!**
