Slater Safety

Put your trust in the company
who won't let you down

For over a quarter of a century Slater Safety have been committed to providing the best possible solutions for the general welfare and safety of your workforce: protective clothing and workwear, hygiene and general safety products in the quality you want and at a price which suits your business needs. This commitment is backed by outstanding customer service based on a level of market knowledge and expertise which is, quite simply, second to none.

TRUST IN AN ESTABLISHED BUSINESS

Slater Safety has been established for over 25 years. Steady and consistent growth has resulted in a sound organization able to withstand the fluctuating demands of the current economic climate.

TRUST IN AN ETHICAL BUSINESS

Key values at Slater Safety are integrity, decency and fairness: values which underline our relationships with customers, suppliers and staff alike. We believe in paying a fair price for our products, reflecting acceptable local labour cost worldwide, thus enabling us to establish long term relationships with suppliers and provide you with consistency. Of course, people are at the very heart of our business: our dedication to improving the performance and job satisfaction of our staff is reflected in our service to you.

TRUST IN A BUSINESS WITH CONSISTENT QUALITY STANDARDS

At Slater Safety every product is subjected to stringent quality control before being offered - only products which meet all the relevant safety standards are supplied.

TRUST IN A BUSINESS WHICH CARES FOR THE ENVIRONMENT

At Slater Safety we have an on-going commitment to reduce our impact on the environment in our offices, warehousing and transportation. Furthermore, where possible we source products from companies who are themselves both environmentally and efficiency-aware.

TRUST IN A BUSINESS WHICH HELPS YOU RUN YOURS

Whether you order centrally or by location, tracking purchases, particularly in multi-site companies, can be a logistical nightmare. Slater Safety can do the work for you with full management reporting available in a variety of formats to precisely suit your needs.

TRUST IN A BUSINESS WHICH DELIVERS ON TIME

At Slater Safety all goods are despatched either by our own transport or by reputable nationwide next day carriers. Furthermore, we endeavour to ensure that the vast majority of products on offer are held in stock. The combination of these elements means that in general goods are normally delivered within 48-hours of order.

TECHNA WEAR

Clothing

EN STANDARDS

GENERAL

EN 340 Protective Clothing General Requirements

This standard specifies general performance requirements for all protective clothing which is claimed to comply with an EN standard and covers labelling requirements, ergonomics, innocuousness, size, ageing and compatibility.

COLD & RAIN PROTECTION

EN 342 Protection against Cold (Temperatures lower than -5°C)

There are 4 tests carried out as follows:
Basic Resulting thermal insulation measured on a moving thermal manikin. Resulting thermal insulation measured on static manikin - optional.

- 1 - 3 Air permeability
- 1 - 2 Waterproofness

EN 343 Protection against Rain

There are 2 levels in this standard

- 1 - 3 Resistance to Water Penetration
- 1 - 3 Water Vapour Resistance (Breathability)

HIGH VISIBILITY

EN 471 High Visibility

This standard has 2 different performance areas

- 1 - 3 The area of fluorescent background material

	Class 3 (highest)	Class 2 (Intermediate)	Class 1 (Lowest)
Minimum background Material m ²	0.80	0.50	0.14
Minimum reflective material mm	0.20	0.13	0.10

- 1 - 2 The performance of the retro-reflective material

GO/RT 3279 Railway Group Standard for High Visibility Clothing

This standard mandates minimum requirements for high visibility clothing to ensure people are conspicuous when on the lineside or on or near the line.

HEAT & FLAME PROTECTION

EN ISO 11612 Protective Clothing to Protect against Heat and Flame

Supersedes **EN 531**

The standard specifies the performance requirements for garments which protect the body from heat and flame. The standard is NOT applicable for Fire Fighters (EN 469) or Welders (EN 11611).

There are six code letters relating to different tests within this standard and thermal protective clothing shall meet code letter A and at least one transmission performance at level 1 or above.

Code Letter	Test	Levels
A	Limited Flame Spread	1 - 2
B	Heat Transfer (convective heat)	1 - 3
C	Heat Transfer (radiant)	1 - 4
D	Molten Aluminium Splashes	1 - 3
E	Molten Iron Splashes	1 - 3
F	Heat (contact)	1 - 3

EN ISO 11611 Protective Clothing for use in Welding and Allied Processes

Supersedes **EN 470-1**

This standard specifies very strict design of protective clothing and includes hoods, aprons, sleeves and gaiters. These are 2 Classes with specific performance requirements;

Class 1 is protection against less hazardous welding techniques and situations, causing lower levels of spatter and radiant heat.

Class 2 is protection against more hazardous welding techniques and situations, causing higher levels of spatter and radiant heat.

EN ISO 14116 Protection against heat and flame

Supersedes **EN 533**

This standard refers only to the material or material assemblies from which the garments are made and is intended to protect workers against occasional brief contact with small flames. The working circumstances offer no significant heat hazard and there is no presence of another type of heat.

There are 3 possible performance levels; 1(lowest), 2 (intermediate) & 3 (highest).

From office wear to high-visibility, and everything in between; our extensive range of clothing will ensure staff are safe and comfortable, whatever their working environment.

ELECTRIC ARC PROTECTION

EN ISO 61482 Protection against the thermal hazards of an electric arc

This standard measures the performance of clothing for protection against the thermal hazards of an electric arc by one of two methods;

EN ISO 61482-1-1 (Identical to IEC 61482-1-1:2009) is an Open Arc test method and measures the Arc Thermal Performance Value (ATPV) of flame resistant materials in cal/cm².

EN ISO 61482-1-2 (Identical to IEC 61482-1-2:2007) is an Arc in Box test by using a constrained and directed arc for which there are two Classes:
Class 1 4kA
Class 2 7kA

ANTISTATIC GARMENTS

EN 1149 Protective Clothing with Electrostatic Properties

EN 1149-5 This standard covers the performance requirements of antistatic PPE and refers to the choice of two different test methods;

EN 1149-1 – Measurement of Surface Resistivity. This test is most appropriate for materials which the electrostatic dissipative behaviour is based on surface conductivity (for instance containing surface conductive yarns or a homogenous conductive coating) and is not appropriate for core conducting fibres.

EN 1149-3 – Measurement of Charge Decay. This test method is referenced for materials for which the electrostatic dissipative behaviour is based on core conducting fibres but may also be used for surface conducting materials.

PROTECTION FROM CHEMICAL AND DUSTS

EN 14605 Protective Clothing against Liquid Chemicals

Type 3 – Full Body Clothing, Liquid Tight Connections (Jet Spray)

Type 4 – Full Body Clothing, Spray Tight Connections

Types PB[3] or PB[4] – Partial body protection only

EN 13034 Protective Clothing against Liquid Chemicals – Limited Protective Performance

Type 6 – Liquid Chemical Protective Suits

Type PB[6] – Partial body protection only

This standard covers the lowest level of chemical protection intended to protect from potential exposure to small quantities of spray or accidental low volume splashes of less hazardous chemicals against which a complete permeation barrier (at molecular level) is not required.

EN ISO 13982-1 Protective Clothing against Solid Particulates

Type 5 – Chemical protection against airborne solid particulates

EN 943-1 Protective Clothing against Liquid and Gaseous Chemicals, Aerosols, and Solid Particles

Type 1 – Gas Tight Suits, Ventilated and Non-Ventilated

Type 2 – Non Gas Tight Suits

EN 1073 Protective Clothing against Radioactive Contamination

EN 1073-1 Ventilated Suits

EN 1073-2 Non-Ventilated Suits

EN 14126 Protective Clothing against Infective Agents

TECHNAWEAR

Our Technawear products reflect the integrity and strong values that underpin Slater Safety. While fit for purpose, each product is built to last, be aesthetically pleasing and be a pleasure to wear throughout the working day. This range epitomizes our commitment to 'workwear solutions'.

By utilising the world's finest fabrics, superior quality threads and fastenings, together with uncompromising attention to detail in design, we are able to make workwear that stands up to the rigours of the job. Each garment incorporates generations of experience to provide the wearer a product will exceed their

expectations and give staff confidence and comfort - whatever the conditions. In fact, our Technawear products make ill-fitting, poor quality workwear a thing of the past. All Technawear products are sourced using companies that display strong corporate social, ethical and environmental responsibility. With our core-values in mind, the Techna brand reflects Slater Safety's responsibility and respect for our employees, customers and suppliers.

Corporate Image

EMBROIDERY

Many of the garments shown can be embroidered with your company details. Using premium threads and the most advanced embroidery machines, the finished result adds prestige to your corporate image. Embroidery is very durable and will withstand industrial laundering. Our own embroidery experts ensure your garments are enhanced by the accurate replication of your logo and the care in application.

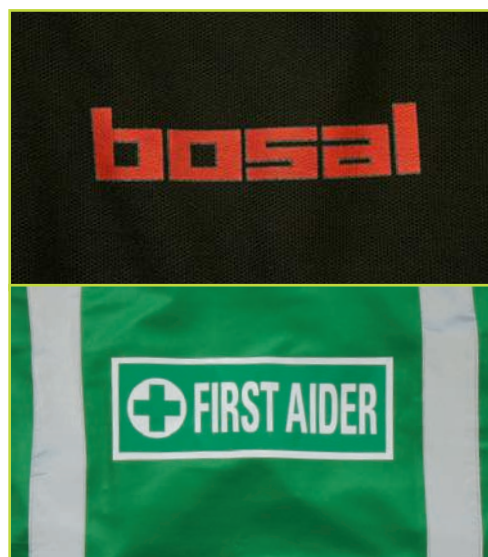

CORPORATE IMAGE ORDERING PROCESS

STEP ONE

Discuss the most suitable method of personalisation with our sales team.

STEP THREE

Supply a copy of your company logo either in hardcopy or digital file (e.g. JPEG or PDF), together with any specific Pantone references.

HEAT FUSION TRANSFERS

Single or multi-colour, high quality transfers suitable for application to most types of garments, either as a front or rear logo. These transfers have been created to withstand industrial laundering at 90°C and remain flexible throughout the life of the garment. The application process is critical to the longevity of the logo and garment, and our experience in this area ensures the transfers are applied correctly every time.

STEP TWO

Decide on a suitable size, number of colours and location of logo.

STEP FOUR

Approve the logo artwork or sample and order the garments required for personalisation.

A strong corporate image can elicit trust, denoting quality, professionalism and dependability. It can be the deciding factor in winning or losing customer affinity and ensuring their loyalty.

LOGISTICS MADE EASY

Order your corporate clothing from Slater Safety and we'll ensure logistical simplicity. If you are happy to allow individual members of staff to order approved workwear and equipment specific to their job, this can be delivered direct to their location. This service is ideal for multi-site

companies ensuring consistency throughout the workforce without the need for bulk ordering. Alternatively, if you prefer to order your products centrally we can ensure that they are collated and packaged by individual, meaning all you have to do is hand them out.

CORPORATE ORDERING PROCESS

STEP ONE

When ordering centrally order the total number of items together with details of colours and sizes by individual.

STEP TWO

We fold, collate and package the order for each individual.

STEP THREE

Packages are delivered labelled with the wearer's name, the contents and sizes.

Gloves

Gloves

The Personal Protective Equipment at Work Directive 89/656/EC requires employers to provide the employees with appropriate Personal Protective Equipment (PPE). Protective gloves which are classified as PPE must be CE marked.

To assist in the selection of PPE, the above directive is written such that safety equipment is categorised to enable safety personnel to select appropriate PPE to match the hazards and risks identified in Risk Assessments.

The PPE risk categories are described as Simple design (Category I), Intermediate Design (Category II) and Complex Design (Category III).

SIMPLE DESIGN - CAT I

Simple Design gloves may be used in situations where the end-user can identify the hazards and level of protection required, where the effects of the hazard are gradual and can be identified in good time.

Examples of simple design gloves include: gardening gloves, protection against cleaning materials of weak action, protection against heat (not above 50°C) and protection against minor impacts and vibrations

COMPLEX DESIGN - CAT III

Complex Design gloves protect against dangers that may seriously or irreversibly damage health, the effects of which the end-user cannot identify in sufficient time.

Examples of such gloves include: protection against chemical attack or ionising radiation, protection against heat where the air temperature is above 100°C, protection against cold where the air temperature is below -50°C, and protection against electrical risks (for example high voltage). These gloves also have to be produced under an approved quality system or be type tested on an annual basis.

INTERMEDIATE DESIGN - CAT II

Intermediate Design gloves are those products which do not fall into either Simple Design or Complex Design gloves.

EUROPEAN STANDARDS (EN STANDARDS)

European standards have been developed to enable the assessment of **Intermediate** and **Complex Design** gloves, some of which are detailed below;

EN 420 GENERAL REQUIREMENTS FOR GLOVES

EN 420 defines the general requirements for most types of protective gloves including Product and Packaging Information and Marking, Design and Construction, Fitness for Purpose, Sizing, Comfort and Efficiency, Innocuousness and Storage.

Sizes defined by EN 420 are as follows;

Glove Size	Hand		Glove
	Palm Circumference (mm)	Length (mm)	Minimum Length (mm)
6	152	160	220
7	178	171	230
8	203	182	240
9	229	192	250
10	254	204	260
11	279	215	270

EN 388 MECHANICAL HAZARDS

Mechanical hazards EN 388

This standard measures the resistance of gloves to a range of mechanical hazards associated with handling rough or sharp materials, with 4 specific tests. The results are scored as noted below;

Performance Level	
0 to 4	Abrasion resistance
0 to 5	Blade cut resistance
0 to 4	Tear resistance
0 to 4*	Puncture resistance

*1 being the lowest performance rating, 0 being a fail and X denotes no test was carried out.

It should be noted that this standard does not cover the handling of hypodermic needles or moving machinery.

Your staff will be in safe hands with our comprehensive range of gloves and other hand protection.

EN 374-2 Resistance to penetration by Micro-organisms

Micro-organisms EN 374-2

This standard assesses the performance of a glove as an effective barrier against liquids and micro-organisms. Gloves must achieve at least level 2. Gloves are assessed according to the acceptable quality level (AQL).

Level	1	2	3
AQL	4.0	1.5	0.85

EN 374-3 Chemical Hazards

Specific chemical protection EN 374-3

This standard measures the time taken for a chemical to breakthrough the glove material. To carry the chemical pictogram, products must meet at least level 2 (>30mins breakthrough time) when tested against three of the following chemicals:

A Methanol	F Toluene	K Sodium
B Acetone	G Diethylamine	hydroxide 40%
C Acetonitrile	H Tetrahydrofuran	L Sulphuric
D Dichloromethane	I Ethyl acetate	acid 96%
E Carbon disulphide	J n-Heptane	

Performance Level	1	2	3	4	5	6
Breakthrough time (mm)	>10	>30	>60	>120	>240	>480

The glove may then carry the above symbol together with the 3 letters of the chemicals against which it was tested.

General Chemical Protection EN 374

For gloves that **do not** achieve the 30 mins breakthrough time but **do** pass the leak test for EN 374-2 may be classified as "Low Chemical Resistant" gloves and use the above symbol.

EN 511 Protection from Cold Hazards

Protection from Cold EN 511

This standard assesses the Thermal Insulation qualities of a glove in relation to Convective Cold, Conductive Cold and Water Impermeability and is scored as follows;

Performance Level	
0 to 4	Convective cold resistance
0 to 5	Contact cold resistance
0 to 1*	Water impermeability

*1 being the lowest performance rating, 0 being a fail and X denotes no test was carried out.

EN 407 Protective Gloves against Thermal Risks

Thermal Hazards Heat and/or Fire EN 407

This standard tests the performance of a glove against a wide range of thermal hazards.

Performance Level	
0 to 4	Burning behaviour
0 to 4	Contact heat resistance
0 to 4	Convective heat resistance
0 to 4	Radiant heat resistance
0 to 4	Resistance to small drops of molten metal
0 to 4*	Resistance to large quantities of molten metal

*1 being the lowest performance rating, 0 being a fail and X denotes no test was carried out.

Head Protection

Head Protection

Eye Protection

EN STANDARDS

EN 166	Personal eye protection
EN 169	Welding filters
EN 170	Ultraviolet filters
EN 171	Infrared filters
EN 172	Sunglare filters for industrial use.

All safety eyewear must be tested and approved to EN 166. The classifications and markings are detailed as follows;

Code Number	Filter Type
2	UV filter
2C or 3	UV filter with good colour recognition
4	Infrared filter
5	Sunglare filter
6	Sunglare filter with IR spec
Optical Class	
1	Can be worn at all times
2	For occasional use
Protection	
3	Liquid droplets or splashes
4	Large dust particles
5	Gas and fine dust particles
8	Short circuit electric arc
9	Molten metals, hot solids
Shade Number	
1.2	Clear, Amber
1.4	XTP, Blue
1.7	Green, Anti flash
2.5	Smoke, Silver or blue mirror
3.1	Dark smoke
5.0	Dark green - gas welding
Mechanical Resistance	Filter Type
A	High energy impact (190 m/s)
B	Medium energy impact (120 m/s)
F	Low energy impact (45 m/s)
S	Increased robustness (12 m/s)
Optional Requirements	
K	Resistance to surface damage by fine particles (Antiscratch coating)
N	Resistance to lens fogging (Antimist coating)
T	Extreme Temperature of -5°C and +55°C

Hearing Protection

EN STANDARDS

EN 352-1	Earmuffs
EN 352-2	Earplugs and banded products
EN 352-3	Helmet mounted earmuffs
EN 352-4	Level-dependant earmuffs
EN 352-5	Active noise reduction earmuffs
EN 352-6	Ear-muffs with electrical audio input
EN 352-7	Level-dependant earmuffs

SNR (SINGLE NUMBER RATING)

This is a calculated figure and gives an indication of the protection level of a hearing protection device. It should always be used in conjunction with the H, M, L figures and a comprehensive risk assessment.

The Control of Noise Regulations 2005 places duties on employers and employees which are intended to eliminate or at least reduce the loss of hearing due to noise exposure.

There are two exposure action values (EAV) and an Exposure Limit Value (ELV)

Lower EAV	Upper EAV	ELV
At 80dB(A) for an 8 hour day or a peak of 135dB(C)	At 85dB(A) for an 8 hour day or a peak of 137dB(C)	87dB(A) for an 8 hour day or a peak of 140dB(C) is the maximum level allowed in the ear.
Employers should;	Employers should;	If this has occurred or is likely to occur, a noise reduction program must be implemented.
Provide a range of hearing protectors, usage is voluntary.	Provide a range of hearing protectors, usage is compulsory.	
Training should be given on the risk of hearing loss, safe working practices, detection of hearing damage and how to use hearing protectors.	Audiometric health surveillance should now be part of the control measures.	
Audiometric health surveillance should be considered for those we might consider at risk.		

Without the correct head protection, staff are even more vulnerable to serious and lasting injury. Our range of products includes not only head protection, but also eye and ear defenders and respiratory protection.

Respiratory Protection

EN STANDARDS

EN 136	Full face masks
EN 137	Self contained breathing apparatus
EN 138	Full face mask / hood with fresh air hose
EN 139	Half / full face mask with compressed air line
EN 140	Half mask
EN 146	Hood / helmet with powered unit for particulate protection only
EN 147	Half / full face mask with powered unit for particulate protection only
EN 149	Disposable filtering mask
EN 270	Hood / helmet with heavy duty compressed air line
EN 1835	Hood / helmet with light duty air line
EN 12419	Half / full face mask with light duty air line
EN 12941	Hood / helmet with powered unit
EN 12942	Half / full face mask with powered unit
WEL	Workplace exposure limits are set by Health & Safety Commission and are published in the EH40. Please contact us for more information.

DEFINITION HAZARDS

Dusts are created when solids are broken down into particles – the smaller the dust, the greater the hazard.

Mists are tiny droplets that are formed from liquid materials by atomisation and condensation processes such as spraying.

Metal Fumes are created when metals are vapourised under high heat. The vapour is cooled quickly and condenses into extremely fine particles.

Gases are airborne at room temperature and are able to diffuse or spread freely and quickly. They are often odourless and invisible.

Vapours are the gaseous state of substances that are liquids or solids at room temperature.

Head Protection

EN STANDARDS

EN 812	Bump caps
EN 397	Industrial safety helmets
EN 1384	Equestrian helmets
EN 12492	Mountaineering helmets
EN 14052	High performance industrial helmets

STORAGE, LIFESPAN AND CARE

A safety helmet can be stored in its original carton between 0°C and 30°C in the dark for up to 5 years. They should never be stored in direct sunlight or heat.

A 2 year lifespan could be considered if helmets are used constantly and 5 years if used infrequently and stored correctly, after which they should be destroyed. Some environments are harsh enough to degrade the helmet faster and this must be considered. Helmets should always be replaced if they are involved in an incident, even a minor knock, or if there are visible cracks or deep scratches.

Helmets may be washed with warm soapy water and a soft cloth. Never use solvents or abrasives.

BRANDING

Safety helmets can be branded with your company logo either through directly printing or via an approved vinyl labelling process. Some safety helmet materials are very sensitive to chemical attack and inappropriate adhesives or markers should not be used

Prescription Eyewear

“

We offer a bespoke prescription service with a wide choice of fashionable, functional frames and lens materials, catering for all aspects of industry, including pharmaceutical, engineering, construction and manufacturing.

All prescription spectacles are supplied with anti-scratch coating, spectacle case, lens cloth and instructions. Prescription forms are available to assist in the ordering of the spectacles, which can be personalised with your company details free of charge.

”

ORDERING PROCESS

STEP ONE

Complete the personal details on the prescription form and any special instructions and retain the back copy.

STEP TWO

The employee takes the form to an optician. The optician carries out an eye test, completes the form and sends three copies to the manufacturers, retaining one copy for his records.

STEP THREE

The prescription spectacles are manufactured, tested and returned to the optician.

STEP FOUR

The optician will check the spectacles upon receipt and then contact the employee to arrange fitting and collection. All invoicing will be carried out by Slater Safety.

PLEASE NOTE

We invoice your company for the employee's spectacles. Eye tests must be paid direct to the optician. Dispensing fees, sight tests, tinted or anti-reflective coatings are additional to the standard costs.

Please request current frame style catalogue. Frame samples available on request.

TORNADO

The Tornado respiratory protection range is a modular respiratory protection system allowing for virtually every potential application within the workplace. With a choice of Powered Filtered Air or Constant Flow Airline and a comprehensive range of headtops, Tornado provides the most versatile respiratory solutions available.

**D08.T/POWER****Powered Air Purifying Unit**

- Ergonomic design, compact and unobtrusive
- Intrinsically safe, suitable for use in potentially explosive gas and dust atmospheres
- Supplied with intrinsically safe 8hrs NiMH battery and smart charger
- Electronic micro-processor control automatically detects the headtop fitted and compensates and optimises the airflow
- Provides visual and audible warnings of filter clogging or low battery charge

EN 12941/2

**D08.TF233****ABEK2Hg-PSL Gas & Particulate Cartridge**

- Gas Cartridge for Organic
- Inorganic (Bp >65°C)
- Ammonia and Acid gases
- Mercury vapour and solid and liquid particulates (dusts, fibres, mists, fumes, bacteria and virus)

**D08.PF251****PSL Particulate Filter**

- Fine toxic and carcinogenic dusts, fumes, water and oil based mists / aerosols

First Aid

First Aid

STANDARDS

BS8599-1 Is the standard that sets the minimum level that workplace first aid kits should conform to.

WHAT THE LAW SAYS

The Health and Safety (First Aid) regulations 1981 states;

"An employer shall provide or ensure that there are provided such equipment and facilities as are adequate and appropriate in the circumstances for enabling first aid to be rendered to his employees if they are injured or become ill at work"

WHAT SIZE OF KIT DO I NEED?

Employers are required to make a risk assessment to decide what the hazard levels are and how many employees are involved in the area to be covered. The guide below should be used in conjunction with a risk assessment to decide on the size and placement of first aid kits in the workplace.

ADDITIONAL FIRST AID MATERIALS & EQUIPMENT

The assessment may conclude that there is a need for additional materials and equipment, for example scissors, adhesive tape, disposable aprons, individually wrapped moist wipes. These may be kept in the first-aid container if there is room. Where mains tap water is not readily available for eye irrigation, at least 1 litre of sterile water or sterile normal saline (0.9%) in sealed, disposable containers should be provided.

FIRST-AIDERS

Where 50 or more people are employed, at least one such person should be provided unless the assessment justifies otherwise.

FIRST AID ROOMS

A first aid room or rooms will usually be necessary in establishments with high risks, such as shipbuilding firms, chemical industries or large construction sites and in larger premises at a distance from medical services. A designated person should be given responsibility for the room.

Category of Hazard	Number of Employees	Number & Size of First Aid Kit
Low Hazard e.g. Shops, Offices, Libraries	< 25 25 - 100 > 100	1 small Kit 1 Medium Kit 1 Large kit per 100 employees
High Hazard e.g. Light engineering and Assembly work, Food processing, Warehousing, Extensive work with dangerous machinery or sharp instruments, Construction, Chemical manufacture etc.	< 5 5 - 25 > 25	1 small Kit 1 Medium Kit 1 Large kit per 25 employees

Be prepared. When accident or injury strike, make sure you are fully equipped to provide the necessary level of first aid – whatever the circumstances.

CONTENTS FOR FIRST AID KITS

FIRST AID

**THE ZOLL AUTOMATED EXTERNAL DEFIBRILLATOR (AED)**

The AED Plus does more than just defibrillate. It ensures that all rescuers respond appropriately during a sudden cardiac arrest emergency by coaching them through every step of the rescue process including defibrillation when necessary. It's one-piece electrode measures the rate and depth of chest compressions during CPR and immediately tells rescuers how well compressions are being performed, with audio and graphic prompts and feedback.

N35.2010

AED+ Defibrillator

- The unique graphical interface, pictures with text displays and voice prompts help the rescuer every step of the way
- The lid is designed to act as a passive airway support
- Data can be downloaded via a standard infrared port
- Self-Testing every one to seven days, assures constant readiness
- Supplied complete with carry bag, batteries, adult CPRD-Pad electrode, prep pack comprising a CPR barrier mask, scissors, disposable gloves, a prep razor, a towel and a moist towelette
- All information recorded by the AED Plus in an emergency, including CPR compression data, ECG, and optional audio recording, can be evaluated and analysed by a medical professional for retrospective analysis.

- Cleansing, Moisturising, Anti-bacterial, Antipruritic, Barrier protection, Deodorising and Soothing
- Effectively replaces traditional methods of continence care
- Dermatologically tested, PH neutral, Alcohol and lanolin free
- Maceratable for convenience and less waste

N40.GCDS500

Clinell Disinfectant Spray 500ml

- Thoroughly cleaned and disinfects any surface
- Contains unique formula of 6 independently acting biocides
- Kills 99.999% of all known micro-organisms incl. MRSA, Salmonella, Listeria, Influenza
- Lasts for up to 72 hours
- Safe on hands
- Has had more extensive testing than any other similar product
- Ideal for surfaces, kitchens, bathrooms, telephone receivers, door handles, keyboards, light switches, hand rails etc.

N40.GCHSS60

Clinell Hand & Surface Spray Sanitiser 60ml

- Cleans and sanitises hand and hard surfaces
- Quick drying and effective
- Works within 10 seconds and kills 99.999% of germs, lasting for 24 hours
- Non-flammable and safe

N40.GCS25

Clinell Sporidol Wipes

- pack of 25

- Sporidol wipes provide a powerful and safe alternative to chlorine
- Proven to kill more than 6 log of spores in 1 minute contact time
- Activated by the addition of water generating peracetic acid on demand
- Proven to kill all known micro organisms
- Designed for use on all surfaces as well as blood/body fluid spills

N40.GCW200

Clinell Universal Sanitising Wipes - pack of 200

- Single, universal product to clean and disinfect hands, surfaces and equipment
- Contains unique formula of 6 independently acting biocides
- Kills 99.999% of all known micro-organisms incl. MRSA, Salmonella, Listeria, Influenza
- Lasts for up to 72 hours
- Safe on hands
- Tested in accordance with EN 1276 & prEN 12054

Workplace Safety

Workplace Safety

SPILL CONTROL

With the ever increasing legislation based on "the polluter pays", many companies have now adopted a proactive rather than reactive approach to spillage to limit the impact of any spillage on the surrounding environment and their exposure to litigation.

The Integra.sorb range of absorbents have been designed to assist in the containment, absorption and clearance of a wide range of spills on both water and land by creating an easily identifiable, highly absorbent range of products that work.

OIL STORAGE REGULATIONS

There are strict laws in the UK that govern how fluids should be stored and our Spill Containment products will help you conform to these regulations.

The Control of Pollution (Oil Storage) Regulations 2001 have been in force since 2005 and apply to all industrial, commercial or institutional sites in England and Wales storing 200 litres or more of oil or fuel above ground in one or more containers outdoors. The Prevention Pollution Guidelines from the Environmental Agency would however apply to indoor storage.

The Water Environment (Oil Storage) Regulations 2006 has been in force from 2010 and covers both indoor and outdoor storage.

WHAT'S REQUIRED?

All containers storing oil or fuel whether a drum, an IBC or a tank, must be sufficiently bunded within themselves or be stood on a spill pallet or drip tray that provides sufficient secondary containment.

The bund must have sufficient capacity to contain 25% of the total stored, or 110% of the largest container, whichever is the greater.

IP RATINGS

IP Ratings (Ingress Protection or International Protection Ratings) utilizes a 2 digit code to specify the degree of particle and water resistance of an electrical enclosure or mechanical casing.

The standard aims to provide users more detailed information than vague markings like "waterproof"
A summary table is as follows;

1st Digit		2nd Digit	
X	Not tested (no protection specified)	X	Not tested (no protection specified)
0	No protection provided	0	No protection provided
1	Protection against entry of objects larger than 50mm square	1	Protection against drops of water falling vertically
2	Protection against entry of objects larger than 12mm square	2	Protection against drops of water falling vertically when the device is tilted up to 15° from its normal position
3	Protection against entry of objects larger than 2.5mm square	3	Protection from entry of water spray from an angle of up to 60° from vertical
4	Protection against entry of objects larger than 1.0mm square	4	Protection from entry of water splashes or spray from any direction
5	Protection against entry of dust in sufficient quantity to prevent satisfactory operation	5	Protection from a low pressure jet of water in any direction
6	Complete protection against entry of dust	6	Protection against heavy seas or a strong jet of water in any direction
		7	Protection against immersion up to 1m
		8	Protection against submersion over 1m

Safety first, every time. This range of preventative safety products will help you to minimise the chance of accidents and injuries in the workplace.

FALL ARREST

Fall Arrest Protection is classified as complex design (Category III) under The Personal Protective Equipment at Work Regulations as protection against mortal danger. The following standards apply to this type of equipment;

EN 353	Mobile Fall Arrest Devices
EN 354	Lanyards
EN 355	Energy Absorbing Fall Arrest Lanyards
EN 358	Work Positioning Lanyards
EN 360	Self Rewinding Fall Arrest Devices
EN 361	Full Body Harnesses
EN 362	Hooks, Karabiners & Connectors
EN 795	Tripod / Fixed Systems
EN 813	Work Positioning Harness
EN 1496	Rescue Lifting Devices
EN 1497	Rescue Harnesses

FIRE SAFETY

Portable Fire Extinguishers should conform to EN3 and should be regularly checked and properly maintained at least annually.

The Fire Safety Order Act 2005 imposes its requirements primarily on the "Responsible Person" (RP). In a workplace the RP is usually the employer and whilst they can delegate their tasks they can't delegate their duties. These duties include Means of Escape, Fire Safety Signs, Emergency Lighting, Fire Detection and Alarm Systems, Fire Extinguishing Equipment and Staff Training.

It is the responsibility of the RP to determine the appropriate general fire precautions by carrying out a Risk Assessment, which must be "suitable and sufficient".

SIGNS

BS ISO 7010 covers the graphical symbols and pictograms used in safety signs and was introduced in 2011 to provide consistency in design across the EU. By using common pictograms and symbols, a universal recognition of safety signs will be encouraged. It means that a fire exit sign in the UK will look the same as it would in any European country.

From the start of 2011 all our signs conform to this regulation.

For a copy of our Safety Signage catalogue call **01772 691000** for a hard copy or download at www.slatersafety.co.uk

OIL ONLY ABSORBENTS

OIL ONLY ABSORBENTS

Oil Only products are always WHITE. They are Hydrophobic which means they only absorb oil and not water and will remain buoyant even when saturated with oil. For use with; Oils, Fuels, Oil Based Solvents

K02.OPH4843

Oil Only Pads

- Oil Only Pad 50cm x 40cm
- Absorbs 1.1 litres per pad
- Packed in 100's

K02.OPH4840

Oil Only Sock

- Oil Only Sock 7.5cm x 1.2m
- Absorbs 4.0 Litres per sock
- Packed in 20's

K02.OPH4842

Oil Only Pillow

- Oil Only Pillow 38 x 23cm
- Absorbs 3.5 Litres per pillow
- Packed in 16's

K02.OPH4841

Oil Only Boom

- Oil Only Boom 20cm x 3m
- Absorbs 80 Litres per boom
- Packed in 4's

K02.OPH4844

Oil Only Drum Top

- Oil Only Drum Top Cover to fit 205 Litre drum
- Absorbs 1.0 Litre per cover
- Packed in 50's

K02.OPH5015

Oil Only Kit 15L

- 15 Litre oil spill kit in a clip close bag

K02.OPH5030

Oil Only Kit 30L

- 30 Litre oil spill kit in a vinyl holdall

K02.OPH5050

Oil Only Kit 50L

- 50 Litre oil spill kit in a vinyl holdall

K02.OPH5120

Oil Only Kit 120L

- 120 Litre oil spill kit in a 2 wheeled bin

K02.OPH5240

Oil Only Kit 240L

- 240 Litre oil spill kit in a 2 wheeled bin

CHEMICAL ABSORBENTS

CHEMICAL ABSORBENTS

Chemical Absorbents are YELLOW in colour. They are designed to absorb virtually any fluid including more aggressive ones. For use with; acids, alkalis, cutting fluids, solvents, oils & fuels, foodstuffs, water

K02.CH021

Chemical Pads

- Chemical pad 50cm x 40cm
- Absorbs 1.0 Litre per pad
- Packed in 200's

K02.CH010

Chemical Sock

- Chemical sock 6cm x 1.2m
- Absorbs 3.0 litres per sock
- Packed in 20's

K02.CH012

Chemical Pillow

- Chemical pillow 38 x 23cm
- Absorbs 3.5 litres per pillow
- Packed in 16's

K02.CH011

Chemical Boom

- Chemical boom 13cm x 3m
- Absorbs 30 litres per boom
- Packed in 4's

K02.CH030

Chemical Kit 30L

-30 litre chemical spill kit in a round plastic container

K02.CH050

Chemical Kit 50L

-50 litre chemical spill kit in a vinyl holdall

K02.CH120

Chemical Kit 120L

-120 Litre chemical spill kit in a 2 wheeled bin

K02.CH240

Chemical Kit 240L

-240 Litre chemical spill kit in a 2 wheeled bin

MAINTENANCE ABSORBENTS

Maintenance Absorbents

Maintenance absorbents are BLACK or GREY in colour. They will absorb most kinds of industrial liquids including oil and water based. Ideal for industrial situations where different types of liquid are present. For use with: oils, fuels, solvents, cutting fluids, milk, water.

K02.MT2043

Maintenance Pads

- Maintenance pad 50cm x 40cm
- Absorbs 1.2 litres per pad
- Packed in 100's

K02.MT2042

Maintenance Pads Lightweight

- Maintenance pad 50cm x 40cm
- Absorbs 0.8 litres per pad
- Packed in 100's

K02.MT2040

Maintenance Sock

- Maintenance sock 7.5cm x 1.2m
- Absorbs 4.0 litres per sock
- Packed in 20's

K02.MT2041

Maintenance Pillow

- Maintenance pillow 38 x 23cm
- Absorbs 4.5 litres per pillow
- Packed in 16's

K02.MT3030

Maintenance Kit 30L

-30 litre maintenance spill kit in a vinyl holdall

K02.MT3050

Maintenance Kit 50L

-50 litre maintenance spill kit in a vinyl holdall

K02.MT3120

Maintenance Kit 120L

-120 litre maintenance spill kit in a 2 wheeled bin

K02.MT3240

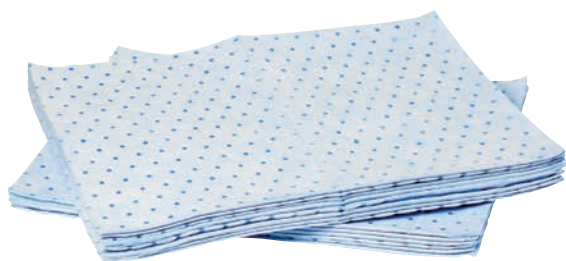

Maintenance Kit 240L

-240 litre maintenance spill kit in a 2 wheeled bin

FOOD AREA ABSORBENTS

FOOD AREA ABSORBENTS

Food Industry absorbents are BLUE in colour. Designed for absorbing most kinds of fluids in food areas. Nonfood compound programme category: J1. Ideal for industrial situations where different types of liquid are present

K02.FA1000

Food Area Registered Pads

- Food area pad 50cm x 40cm
- Absorbs 1.0 litre per pad
- INS registration no. 1795142

K02.FA1001

Food Area Registered Socks

- Food area sock 1.2m x 7.5cm
- Absorbs 4.0 litres per sock
- Packed in 20's
- INS registration no. 1795395

K02.FA1025

Food Area Spill Kit 25L

- 25 litre food area spill kit in a clip close bag

K02.FA1050

Food Area Spill Kit 50L

- 50 litre food area spill kit in a clip close bag

K02.5050

Industrial Outdoor Granules XR60

- Absorbent crush resistant granules
- Ideal for yard use
- 20 litre bag
- Absorbs 10 litres per bag

K02.5000

Industrial Indoor Granules XR70

- Absorbent cellulose granules
- Lightweight for easy handling
- Fire retardant and conforms to BS 476 pt 1
- Derived from sustainable sources
- 30 litre bag
- Absorbs 12 litres per bag

PROTECT OUR WATERWAYS

FIRST LINE OF DEFENCE

K02.SP100

Polyurethane Drain Cover

- Fast and effective PU mat 61 x 61cm
- Dual hardness with one side soft enough to provide a seal around drains
- Resistant to most chemicals, oils, fuels and solvents

K02.SP101

Neoprene Drain Cover

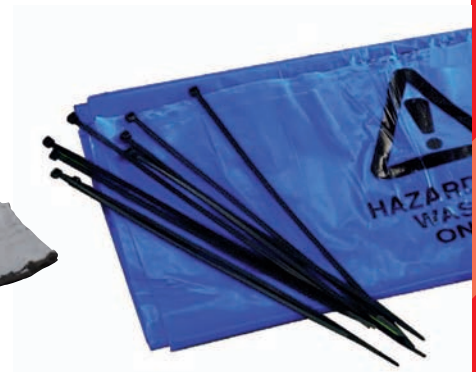

- Reusable drain cover 1 x 1m

K02.SP102

Clay Drain Mat

- Extremely malleable mat 65 x 45cm
- Single use to form a tight seal round drains
- Chemically inert

- Single door
- 1 Shelf
- 460mm wide x 460mm deep x 900mm high
- 7ltr sump capacity

FALL ARREST

**H20.A102****Safety Harness**

- Full body harness
- Rear dorsal D ring
- Front loops
- Double adjustment in chest & legs
- Supplied in a hi visibility backpack

**H20.A104****Scaffolders Harness Kit**

- Full body harness
- Rear dorsal D ring
- Front loops
- Double adjustment in chest & legs
- 1.75m shock absorbing lanyard
- Double action 50mm scaffold hook
- Supplied in a hi visibility backpack

**H20.A110****Rescue / Confined Space Harness**

- Full body harness
- Rear dorsal D ring
- Overhead rescue loop with connector
- Double adjustment in chest & legs
- Supplied in a hi visibility backpack

**H20.A128****Utility Harness**

- Full body harness
- Rear dorsal D ring
- Front central fixing point
- 3 lower fixing points
- Adjustable high comfort shoulder straps
- Adjustable high comfort length straps
- Padded adjustable multi-fixing lumbar support belt
- Supplied in a hi visibility backpack

**H20.A136****Jacket Harness**

- Full body harness
- High visibility integral jacket
- Rear D & front loop attachments
- Elasticated harness for greater comfort
- Supplied in a hi visibility backpack

**H20.A152****Pro Harness**

- Multi purpose pro harness
- Padded shoulder straps
- Quick release buckles
- Rear attachment ring
- Front chest anchor point
- Padded legs
- Easy to don
- Supplied in a hi visibility backpack

H20.A540

Trauma Straps

- Adjustable concealed leg support trauma straps
- For suspension relief in emergency fall situation

RESTRAINT LANYARDS

- Restraint lanyard
- 10.5mm Polyamide rope
- Available in 3 lengths

- Stretch cord surrounded by tubular nylon webbing
- 0.89 x 1.1m
- Aluminium karabiner
- Adjustable barrel lock for tool attachment
- SWL 4.55kg

**H20.EG311****Tool Lanyard Dual**

- Stretch cord surrounded by tubular nylon webbing
- 0.89 x 1.1m
- Double aluminium karabiner
- SWL 4.55kg

**H20.EG312****Tool Lanyard Detachable**

- Stretch cord surrounded by tubular nylon webbing
- 0.89 x 1.1m
- Aluminium karabiner
- Quick release buckles
- Detachable tool connectors available - M/EG313
- SWL 2.27kg

**H20.EG315****Hard Hat Lanyard**

- Buckle hard hat lanyard, stretch webbing
- Prevents hat from falling
- Comfortably attaches to hard hats

**H20.EG313****Tool Lanyard Single**

- For quick exchanges of multiple tools with M/EG312

SQUIDS TIE HOOKS

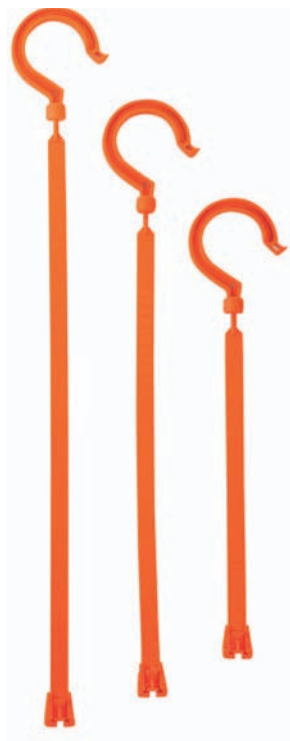

An innovative storage solution with 1000's of uses. They behave like a giant re-usable cable tie to store, transport, lift, carry, support & grip cables, pipes, cords, hoses, wires and a whole host of other items. Constructed from HD Nylon they operate effectively between -40°C and + 80°C and are resistant to a wide range of oils, salts, solvents and alkalis. The removable hook at the top swivels 360°C.

H20.EG3510

Tie Hook Small

- 25mm opening
- Load limit 10kg
- 3 lengths 30cm, 40cm & 50cm

- Easy trigger activation

TORCHES / HEAD LAMPS

WATER & DUSTPROOF TORCH
ATEX APPROVED**K07.EX200R****Right Angled Safety Torch**

- Atex approved for Zones 1 & 2 (Gas) and Zones 21 & 22 (Dust)
- Tough and durable
- Waterproof (IP67), dustproof and antistatic
- Belt clip for hands free working
- Powerful beam
- Unique self-locking lamp capsule
- Chemical resistant
- Suitable for use with breathing apparatus
- Lanyard ring on base
- 2 spare bulbs included
- Requires 2 x D Batteries (M/R20B)

**K07.P14****LED Lenser P14 Torch**

- Patented Advanced Focus System: Spot to Flood Beam focusing
- Speed Focus: single-handed instant focusing
- Dynamic Switch: one switch, three brightness choices - 15%, 100%, 130%
- Robust, yet lightweight, aircraft grade aluminium
- Splash and dust proof design - protects better
- Superior rear tail cap switch - lasts longer
- Gold plated contact for better conductivity
- Belt pouch for storage when not in use
- Lumens: 210
- Burn time: up to 84 hours
- Dimensions: 206mm x 47mm
- Weight: 384g
- Power supply: 4 x AA alkaline batteries
- Effective range: 0-280m

**K07.P7****LED Lenser P7 Torch**

- Patented Advanced Focus System: Spot to Flood Beam focusing
- Speed Focus: single-handed instant focusing
- Dynamic Switch: one switch, three brightness choices - 15%, 100%, 130%
- Robust, yet lightweight, aircraft grade aluminium
- Splash and dust proof design - protects better
- Superior rear tail cap switch - lasts longer
- Gold plated contact for better conductivity
- Belt pouch for storage when not in use
- Lumens: 200
- Burn time: up to 64 hours
- Dimensions: 133mm x 37mm
- Weight: 192g
- Power supply: 4 x AAA alkaline batteries
- Effective range: 0-210m

**K07.P3****LED Lenser P3 Keyring Torch**

- Spot to Flood Beam single handed speed focusing
- Robust, yet lightweight, aircraft grade aluminium
- Splash and dust proof design - protects better
- Handy pocket clip - secures torch
- Superior rear tail cap switch - lasts longer
- Gold plated contact for better conductivity
- Belt pouch for storage when not in use
- Lumens: 16
- Burn time: up to 6.5 hours
- Dimensions: 94mm x 20mm
- Weight: 42g
- Power supply: 1 x AAA alkaline battery
- Effective range: 0-31m

K07.H5

LED Lenser H5 Head Lamp

- Patented Advanced Focus System: Spot to Flood Beam focusing
- Tiltable lamp head – direct light where you want it
- Optimised weight/balance ratio: easier to wear
- Adjustable straps: adds to wearing comfort
- Belt pouch for storage when not in use
- Lumens: 27
- Burn time: up to 30 hours
- Weight: 116g
- Power supply: 3 x AAA batteries
- Effective range: 0-58m

K07.H7

LED Lenser H7 Head Lamp

- Patented Advanced Focus System: Spot to Flood Beam focusing
- Tiltable lamp head – direct light where you want it
- Dimming function – set appropriate lighting strength and avoid dazzle
- Optimised weight/balance ratio: easier to wear
- Adjustable straps: adds to wearing comfort
- Belt pouch for storage when not in use
- Lumens: 170
- Burn time: up to 54 hours
- Weight: 117g
- Power supply: 3 x AAA batteries
- Effective range: 0-180m

K07.M7R

LED Lenser M7R Rechargeable Torch

- Smart Light Technology
- 2 Energy Use Modes – Energy Saving & Constant Current
- 3 Light Programmes – Professional, Easy, Defense
- 8 Light Functions – Morse, Boost, Power, Low Power, Dim, Blink, SOS, Defence Strobe
- Patented Advanced Focus System: superior Spot to Flood Beam focusing
- Speed Focus: single-handed instant focusing
- Robust, yet lightweight, aircraft grade aluminium
- Splash and dust proof design – protects better
- Superior rear tail cap switch – controls Smart Light Technology features and lasts longer
- Gold plated contact for better conductivity
- Hard case – for storage and protection
- Lumens: 220
- Burn time: up to 20 hours
- Dimensions: 156mm x 37mm
- Weight: 206g
- Power supply: Rechargeable Li-ion
- Effective range: 0-255m

ALKALINE BATTERIES

K07.MN2400

AAA Battery

- Dependable and long lasting power
- Operate reliably in temperatures of -20 - +50°C
- Economical bulk packaging for professional applications
- Contains no added mercury
- Box of 10

EN 1276 Test for Bactericidal activity of chemical disinfectants and antiseptics used in food, industrial, domestic and institutional areas.

HAND CARE PROGRAMS

Our aim is to improve the well-being of your workforce through a comprehensive skin care program including Education, Training, Support, Installation, Technical Support and Advice.

It's not just about getting hands clean, it's about keeping skin healthy, changing the lives of workers who thought soiled looking, worn hands went with the job, taking preventative measures to reduce occurrence of occupational dermatitis and improving the perception of quality in a facility by simply making hand care a pleasant experience.

TOUCH FREE DISPENSERS

When people want to get their hands clean, the last thing they need is to touch a dirty dispenser. With our touch free dispensers there is no need to touch anything – simply place your hands below. Couple this with a factory sealed cartridge system which includes a new nozzle with each refill and a full range of hand soaps and sanitizers and you'll see how we've taken hand hygiene to a completely new level.

PAPER PRODUCTS

Our paper products are sourced from environmentally conscious and responsible mills and converters to minimise the impact on the environment.

Comparative studies between different methods of drying hands have been conducted by universities to assess the efficiency of drying hands, changes in bacteria on hands and the potential contamination of other users and the washroom environment from airborne bacteria.

A study was performed on Jet Air Dryers (JAD), Warm Air Dryers (WAD) and Paper Towels (PT) by the School of Biosciences and the results are summarized below;

Drying Efficiency

JAD	>90% dryness in 10 seconds
WAD	>90% dryness in 47 seconds
PT	>90% dryness in 10 seconds

Change in bacteria on hands (Mean averages)

	Fingertips	Palms
JAD	+ 42%	+ 15%
WAD	+ 194%	+ 254%
PT	- 76%	- 77%

Potential contamination of other users and the washroom environment from airborne bacteria

JAD	increase up to 2.0m
WAD	no significant dispersal beyond 0.25m
PT	no significant dispersal beyond 0.25m

Based on these results the use of air dryers (WAD or JAD) should be carefully considered in locations where hygiene is paramount, such as hospitals, doctors and dentists surgeries, schools, nurseries, care homes, kitchens and food preparation areas.

HYGIENE CLEANING EQUIPMENT

Our high quality, durable range of Colour Coded Cleaning Equipment has been designed for use in hygienically sensitive areas where effective colour coding has been proven to be a significant factor in the reduction and prevention of cross contamination. They are designed to give managers peace of mind knowing that the products are reliable, effective in use, robust and easily cleaned.

A clean, fit-for-purpose, hygienic environment keeps staff and visitors safe and happy, and aids productivity. Our wide range of everyday essentials, includes everything from cloths and mops, to buckets and bin bags.

BAYWEST®

Bay West® offers a range of dispensing products ideal for any washroom environment. Wherever your toilets are located, if you need a solution that reduces cost, waste and maintenance then you should choose Bay West®!

Slater Safety are nominated distributors of the Bay West® Green Washrooms Range. Accredited with the European Eco-label means the range is certified "environmentally preferable products".

BAYWEST®

Bay West® offers a range of dispensing products ideal for any washroom environment. Wherever your toilets are located, if you need a solution that reduces cost, waste and maintenance then you should choose Bay West®!

The Bay West systems offer many benefits, which include:

- | | |
|---------------------------|---------------------------------|
| Touch-free dispensers | -Eliminates cross-contamination |
| Totally enclosed products | -Improves hygiene standards |
| High capacity dispenser | -Reduce risk of run out |
| Top up facility | -No stub roll waste |
| Translucent dispenser | -Refill at a glance |
| Lockable | -Eliminates pilferage |

Bay West® has become the first UK 'away from home' brand to provide a range of accredited environmentally preferred washroom products. By attaining the EU Eco-label every part of the manufacturing process - from raw paper pulp to the finished product - was analysed to ensure it met stringent green guidelines meaning Bay West® products are officially 'green washroom' products.

HYGIENE CLEANING EQUIPMENT

High quality, durable colour coded cleaning equipment designed for use in hygienically sensitive areas. Effective colour coding has been proven to be a significant factor in the reduction and prevention of cross contamination and we are pleased to be able

to offer a wide range of products in 8 colours. All our products comply with EU regulations and the U.S. Public Health Service Food Code 1993 and are designed to give managers peace of mind knowing that the products are reliable, effective, robust and easily cleaned.
